# Construction and demolition

**WASTE** REDUCTION **GUIDE AND DIRECTORY** 

Rethink Waste Whakaarohia

Not only are waste disposal fees increasing, but so is the cost of construction materials.

It makes sense to find ways to avoid these costs and make better use of resources.

## What to aim for

The waste hierarchy below describes the different ways of dealing with waste in order of preference. A higher position in the hierarchy means it is better for the environment and generally more cost effective when considering the full material lifecycle.

WASTE DIVERSION

#### **REDUCE**

Generate less waste

#### **REUSE**

Use products again, in their existing form

#### **RECYCLE**

Reprocess waste materials to create new product

#### **RECOVER**

Extraction of materials for energy from waste for further use or processing

#### **TREAT**

Treat waste to change the volume or character

MASTEDISPO

#### **DISPOSE**

Waste sent to landfill that is fit for purpose

### How to reduce waste

#### Before a project starts, look at how waste can be designed out.

- · Where are the opportunities to reduce packaging?
- Are you over-ordering?
- Can you make arrangements in advance with manufacturers on what materials they will take back?
- How can skips be managed to stop public putting waste in them?
- If you want to, you can develop a Site Waste Management Plan. Visit www.branz.co.nz/ sustainable-building/reducing-building-waste/ planning/develop-waste-management-plan or scan the QR code.

- Include any requirements to reduce or sort waste in your contractor and subcontractor agreements.
- Have someone on site responsible for sorting materials that can be recycled or reused.
- Identify destinations for recyclable and reusable materials – check the directory on the following pages.
- Label your bins and skips clearly so everyone knows where things go (multiple languages if necessary).
- Keep track of how much you divert and how much goes to landfill so you can track what you are saving and where you are getting the most benefit from your efforts. BRANZ has some great resources to help with this, such as their REBRI Waste Transfer Form (scan the QR code).
- Make sure the project leader is checking regularly that systems are working and trouble-shooting solutions where needed.
   Bring the conversation into daily pre-starts and toolbox talks
- · Celebrate your successes with your teams and clients!

## **Resource Diversion Directory**

The tables on the following pages list some places in our region which may be able to help **divert your materials from landfill**. We encourage you to also ask the provider how the material is diverted and where their service sits in the waste hierarchy.

Please note that the providers in this directory will have terms, conditions and fees applicable as well as changing availability. It is essential that you contact providers before delivery.
