

Community Board Meeting - Motueka, 17.12.19.  
Tabled Document  
MCB 19-12-17.

From: Ian Wilkinson

1/ With the current roll-out of "5G Technology" and its use of Radio Frequency Radiation, recent scientific research strongly suggests it is harmful to many forms of life and possibly carcinogenic. For the benefit of us all is there a method through out Tasman District Council to implement a public, nationally-coordinated research on 5G to qualify a safe way forward? ✓

2/ I have had a suggestion made to me by the Manager of our Top 10 Motor Camp. That a much needed amenity for children in Motueka especially in times of wet weather is an "Aqua Centre". She suggested they have an excellent example in Timaru, which is also used for competitions. ✓

3/ Further to my presentation last Community Board Meeting I have spoken to the just retired president of the Nelson Astrology Society and he advised some work has already been done towards getting the Nelson-Tasman Area classified as "Dark Sky Status" and support from the Motueka Community Board would be very much appreciated. He will phone me again in January ✓

4/ It is imperative that High Street Motueka (SH60) is made safer. A "Business Advisory Council (BAC)" was set up to provide direct and high-level counsel to our former Ministers Beehive office, under the chairmanship of Christopher Luxon. In July 2019 the BAC made an impassioned plea for the Government to get cracking on the 12 major highway "Roads of National Significance". Could the chairman of our Board issue a letter on High St. direct to Christopher Luxon? ✓

Thank you Mr Chairman
